

Job Title	Senior Service Engineer
Reports to	Field Service Manger
Locations	National
Based	Home Office

**Job Description :**

This is a unique opportunity to work for a large and diversified global Water Treatment and Purification solutions provider as part of the Service team, supporting our blue-chip customer base.

Due to an increase in customer numbers and the scope of existing customers, opportunities have now become available for experienced engineers with skill-sets gained within the Water Treatment / Purification sectors to join our Service team in a senior role supporting our expanding customer base.

The role will report into the Field Service Manager whilst planning and executing the day to day Service tasks of Installation, Maintenance, Servicing and Commissioning of varied equipment in accordance with current industry legislation and within contract and budget.

**The role of Senior engineer will include but is not limited to :**

- Maintain compliance with legislative and environmental requirements (H&S) and ensure risk assessments have been utilised
- Plan and coordinate work in an efficient manner liaising with Service administration, project management, third party suppliers and end customer
- Efficiently carryout all Service works as per contract and given time lines to achieve an above satisfaction view from the customer
- Provide assistance and support on a 'consultancy' level to the customer
- Provide technical support both internally and to customers in preparation of work execution to include but not limited to risk and method statements, permits to work etc.
- Ensuring that parts, materials and equipment are in line with specifications
- Manage and deliver in a timely manner reports as necessary to both internal and external needs
- Have a visionary 'Sales' approach to provide 'bolt-on' and new work lines with customers thereby contributing to the growth of the business

**The successful applicant will possess :**

- A professional qualification or has a proven track record of gained skills with the ability to work across multi disciplines (electrical and Mechanical) competently and safely.
- Has at least 5 years' experience within the water treatment / purification industry and having a good process knowledge of RO/BX/DI systems.
- Has strong communication and interpersonal skills with the ability to manage both internal junior/trainee engineers, sub-contractors and the end customer.
- Have excellent IT skills (Excel, Word, PowerPoint) and the ability to stay organised whilst multi-tasking.
- Ability to fault find both electrically and mechanically
- Be hands-on with installation, repair, modification work which includes various pipe work formats, electrical control systems (PLC literate basic) installed across Industrial, Food & Beverage and Health Care sectors.
- Able to understand electrical, mechanical and P&ID drawings.

**The successful applicant will be required to :**

- Work away from home on occasions (2-3 days per month)
- Be flexible with working hours to suit the business needs (Breakdowns, Call-outs etc.)
- Have a proactive approach to personal development and training
- Partake in a 24hr call-out roster (12 weeks rota)
- Contribute to team discussions
- Be flexible to undertake any reasonable tasks that are within the knowledge and skill-set of the individual.
