

CASE STUDY

CROWN THE GLOBAL DRINKS CAN MANUFACTURER CHOSE ENVIROGEN FOR ITS WATER TREATMENT NEEDS AT ITS NEW STATE OF THE ART PLANT IN SLOVAKIA

Founded in 1892 in Baltimore, USA, Crown is now a global leader in can manufacturing employing over 20,000 people worldwide. Crown have recently built a new beverage can manufacturing base in Slovakia that will supply local and international customers in the region.

It was imperative for Crown, when building their new plant to minimize the environmental impact. Water is a vital component in the can making process and Crown insisted on sourcing the latest sophisticated water treatment technology. Their goal was to recycle 90% of the water used in production.

Envirogen were approached and subsequently selected as Crown's key partner for this project. Crown quickly realised that Envirogen have industry experts and the latest equipment to achieve their goal. Once appointed Envirogen worked closely with Crown to deliver a number of different water treatment solutions throughout the manufacturing process. Envirogen quickly advised Crown that the local town's water supply needed treatment to bring it up to the required standard.

This was achieved by supplying a multimedia filter, RO system with sodium bisulphite and anti-scalant dosing as pre-treatment and a recovery RO. This minimises the volume of RO concentrate ensuring maximum efficiency.

For the recovery of demineralised water from the production line, Envirogen supplied cartridge filtration, an activated carbon filtration unit feeding a bespoke duplex deionisation plant which was specifically designed to ensure it was robust enough to deal with the return water quality. Of the 5m³ / hr water that is used in the rinsing process 4.5m³ is recovered and reused.

Envirogen's MultiPro RO fitted on site

FOLLOWING-ON FROM THE SUCCESS OF THE FIRST CAN LINE IN SLOVAKIA, CROWN DECIDED TO INSTALL A SECOND LINE AT THE SITE

Envirogen were asked to be the main contractor for the additional water treatment at the site as we had proved our capabilities on the first line. To ensure the success of the second line, Envirogen suggested and subsequently made the following alterations to the process improving its efficiency:

- Addition of another multimedia filter and primary RO, to meet the increase in demand from the second line.
- Re-commission the duplex deioniser changing the operating parameters, giving the extra capacity for both lines.
- A second stream wastewater recovery system included a DAF (dissolved air flotation) unit. The post-DAF filter system was replaced with a continuous backwashing sand filter, which provided improved performance of the system.
- The operating parameters of the system were adjusted to give better control of the metal precipitation, leading to improved sludge recovery and treated water quality.

All of the work was completed on time and to budget. By dealing with a single contractor on site the whole process was made much easier.

PERRY GOODWIN,
Production Engineer, states:

“EWS were chosen for their technical expertise and ability to provide us with a water treatment solution with a single point of contact. We have found them to be very good to work with, not only in their technical knowledge but with the backup support they provide.”

The installed Deioniser and Reverse Osmosis Plant as seen on site

KEY OUTCOMES:

- Crown can now recycle 90% of the water in the can making process, minimising their environmental impact from the site
- The project was delivered on time and to budget
- Envirogen trained site personnel as part of the process to ensure Crown has the knowledge and support they require
- PureCare service and maintenance contract ensures the system runs to maximum efficiency

ENVIROGEN

ABOUT THE CLIENT

Crown Holdings, Inc., through its subsidiaries, is a leading global supplier of rigid packaging products to consumer marketing companies, as well as transit and protective packaging products, equipment and services to a broad range of end markets. The Crown Beverage Can Plant, Slovakia, supplies beverage cans to international brewers and soft drink companies in Slovakia, Hungary, southern Poland, the Czech Republic and Romania.

ABOUT ENVIROGEN

Envirogen is a leading international provider of water and wastewater treatment solutions. We solve complex challenges relating to water availability and quality, and help our customers to increase productivity, reduce costs and meet environmental and sustainability targets.

We do this through offering:

- Best in class water and wastewater treatment and process filtration technology
- Expertise in design, project management and engineering
- World class manufacturing and servicing capability

UK HEADQUARTERS

Envirogen Group
Unit 9, Wimsey Way, Alfreton Trading Estate
Alfreton, Derbyshire, DE55 4LS
T: +44 (0) 1773 441029
E: enquiries@envirogengroup.com

EUROPEAN HEADQUARTERS

Envirogen Technologies bv
Penningweg 71, 1507 DG Zaandam, The Netherlands
T: +31 75 204 7200
E: NLinfo@envirogengroup.com

NORTH AMERICAN HEADQUARTERS

Envirogen Technologies
2627 Chestnut Ridge Road, Suite 200
Kingwood, TX 7733
T: 713.979.9142
E: info@envirogen.com

We have a network of regional sales and service teams worldwide:

UK and Europe: UK, The Netherlands, Germany, France, Italy.

USA: Texas, Tennessee, New Jersey, California, Nevada.
